

DIAMOND

THERAPY

HAIR BTX

BOTOX DIAMOND is an intensely nourishing ritual based on the action of carefully selected active ingredients.

Thanks to the synergy of plant oils, proteins, amino acids and marine extracts, the treatment deeply nourishes the hair structure from within, replenishes keratin gaps, and when used with a straightener, provides a spectacular "lamination" effect.

A formula that works wonders – a fusion of science and nature

Natural oils: grape seed oil, argan, black cumin, castor, and amia deeply nourish the hair, strengthen it, add shine and protect against damage.

Proteins and amino acids: hydrolyzed rice and soy proteins, and glycine regenerate the hair from within and improve its resistance.

Marine and plant extracts: algae and amia supply vitamins and minerals, moisturize, and protect against free radicals.

Hydration and protection: humectants and fatty alcohols retain moisture, smooth the hair cuticles, and prevent frizz.

IMMEDIATE RESULTS AFTER THE TREATMENT:

- Regenerated and smoothed hair
- Intense shine and silky softness
- Increased volume without frizz
- Strengthened ends – less splitting
- Long-lasting effect for up to several weeks

HOW TO USE BOTOX DIAMOND DIANA - STEP BY STEP

1. Wash your hair twice to thoroughly remove all impurities, you can use a gentle cleansing shampoo to open the hair cuticle. (when performing the treatment after coloring, apply BOTOX DIAMOND without using a cleansing shampoo)
2. Gently towel-dry the hair. Hair should be damp but not wet (about 60-70% dry).
3. Divide the hair into sections. This helps with even product distribution.
4. **Apply Botox Diamond evenly along the entire length of the hair using a brush or hands (in gloves), avoiding the roots — leave a 0.5 cm gap.**
5. **Massage the product into the hair. For better penetration into the hair structure, you may use a steamer, cap, infrared device, or laser.**
6. Leave the product on the hair for 30–45 minutes; the more damaged the hair, the longer the processing time.
7. Rinse the product thoroughly with lukewarm water.
8. Dry the hair with a blow dryer using a ceramic brush and style as desired.
9. Optional: use a flat iron (for a lamination effect). Straighten each strand at 180–200°C, passing each section 5–8 times.
